

IT Workshop -II (CS251)

Lab Assignment : 3

[1] Create the following class hierarchy:

In main method of another class, create one object each of the following classes: **Person**, **Student**, **Employee** and **Faculty** by calling constructor of those classes. Then display the details for each object.

Note: The constructor in every class should call the parent class constructor wherever possible. The *displayXXXXX()* method in every class should only display the value of instance variable belonging directly to that class and should call the *displayXXXXX()* of parent class to display their instance variable.
